DRAINAGE SOLUTIONS MADE OF GLASSFIBRE REINFORCED POLYESTER (GRP)
STURDY, ECONOMICAL, LIGHT

MEAFLUID INNOVATION AND LIGHTNESS

Glassfibre reinforced polyester is a sturdy high-tech material perfectly adapted for construction purposes. MEA channels are ecological (recyclable, asbestos and heavy metal free) and show very good resistance to pressure (65N/mm²), to bending (12N/mm²) and to extreme temperatures (-35°C to + 200°C).

Looking back on a more than 30 years history MEA is THE specialist for producing GRP channels

Resistant to
chemicals

MEAFLUID 100/150

MEAFLUID fluid redefines the boundaries in the use and installation of channels thanks to the versatility of possibilities in which this system can be used for drainage purposes.

Available in 2 widths, 100 and 150 mm, MEAFLUID is particularly adapted for being used for gardens, front yards and green spaces, offering high water drainage levels coupled with extra long living qualities.

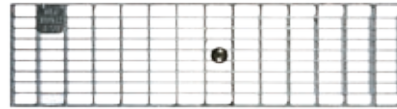

MEAFLUID is ideal for all who are searching for a professional quality drainage solution coupled to an easy to handle and fast to mount product at a fair price.

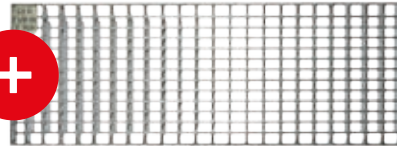

Advantages

- ✓ Extremely sturdy thanks to the GRP material
- ✓ 100 and 150 mm widths
- ✓ Exceptional value for money
- ✓ Easy to install
- ✓ Very light and extremely stable
- ✓ Small range of compatible accessories available
